

Convert to Horizontal Linestring

Command Description

The Convert to Horizontal Linestring command allows the user to convert linestrings containing vertical tab data to horizontal data only, by linearising curves using a chord to arc tolerance.

1. Click in the **Linestring selection** field and then in a graphic view select the linestring you want to convert.
2. Enter the **Chord tolerance** to be used for conversion.
3. Check the **Replace existing** box to replace the original linestring.
4. Do either of the following:
 - Click **Apply** to apply the changes and keep the **Convert to Horizontal Linestring** command pane open.
 - Click **OK** to apply the changes and close the **Convert to Horizontal Linestring** command pane.

The linestring now only has data on its horizontal tab.

Note: This command only works on linestrings with vertical tab data.
