

Command Description

The Reverse Lines command allows the user to reverse multiple linear objects at the same time.

1. Click in the **Entity selection** field and then in a graphic view select the linear objects for which you want to reverse the line direction. Click **Options** for additional selection options.
2. Use the **Show Line Direction Options** button to turn on line directions for ease of identification.
3. Do either of the following:
 - Click **Apply** to apply the changes and keep the **Reverse Lines** command pane open.
 - Click **OK** to apply the changes and close the **Reverse Lines** command pane.

The direction of the lines of the selected linear objects is reversed to the opposite direction.

Note: This command does not work on alignments.
